TECH-ARCH-9026: Architecture Reference Document
Department: Architecture
Author: Brian Berry
Effective Date: 2024-04-25

Architecture Reference Document: TECH-ARCH-9026

1. Document Scope and Executive Summary

This document outlines the architecture reference guidelines for the Architecture department, providing a comprehensive overvi

The scope of this document includes:

* Defining architecture principles and guidelines
* Establishing standard operating procedures (SOPs) for architecture-related activities
* Outlining compliance monitoring and penalty frameworks
* Providing operational governance and accountability mechanisms

2. Core Policies and Standard Operating Procedures

2.1 Architecture Principles

The following principles will guide architectural decisions:

* **Modularity**: Divide systems into smaller, independent components to facilitate maintenance, scalability, and reuse.
* **Scalability**: Design systems to handle increased loads and data volumes by incorporating distributed architecture, caching,
* **Security**: Implement robust security measures, including authentication, authorization, and encryption, to protect sensitive i
* **Reusability**: Favor reusable components and services to reduce development costs and improve efficiency.

2.2 Design Standards

The following design standards will be applied:

* **API Gateway**: Establish a centralized API gateway for managing incoming requests, handling security, and directing traffic
* **Microservices Architecture**: Use microservices architecture for complex systems, ensuring loose coupling, high cohesion, a
* **Cloud Computing**: Leverage cloud computing platforms for infrastructure-as-a-service (IaaS), platform-as-a-service (PaaS),

2.3 Development Processes

The following development processes will be followed:

* **Agile Methodologies**: Adopt agile methodologies, such as Scrum or Kanban, to facilitate iterative and incremental developm
* **Code Reviews**: Conduct regular code reviews to ensure adherence to coding standards, best practices, and quality guideli
* **Testing and Quality Assurance**: Implement comprehensive testing and quality assurance procedures to guarantee system r

2.4 Change Management

The following change management process will be followed:

* **Request and Approval Process**: Submit architecture-related requests through a standardized approval process, ensuring th
* **Change Impact Assessment**: Conduct impact assessments for proposed changes, considering factors such as system stab

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Compliance Monitoring

The Architecture department will:

* **Monitor Architecture Activities**: Track architecture-related activities, including design reviews, code reviews, and testing.
* **Conduct Regular Audits**: Perform regular audits to ensure adherence to established policies, procedures, and standards.

3.2 Penalties for Non-Compliance

In the event of non-compliance with architecture guidelines and standards, the following penalties will apply:

* **Warning**: Issued for minor infractions or first-time offenses.
* **Corrective Action Plan**: Implemented for moderate infractions or repeated offenses, requiring corrective action within a spe
* **Reprimand**: Given for severe infractions or persistent non-compliance, potentially resulting in disciplinary action.

3.3 Operational Governance

The Architecture department will:

* **Establish Clear Roles and Responsibilities**: Define roles and responsibilities for architecture-related activities, ensuring acc
* **Maintain Architecture Knowledge Base**: Develop and maintain a comprehensive knowledge base for architecture-related in
* **Foster Collaboration and Communication**: Encourage collaboration and communication among stakeholders, including arch
