

TECH-ARCH-1117: Architecture Reference Document

Document Metadata

- * Document ID: TECH-ARCH-1117
- * Department: Architecture
- * Author: Russell Robles
- * Effective Date: 2020-08-28

1. Document Scope and Executive Summary

This document outlines the core policies, standard operating procedures (SOPs), and governance framework for the Architecture.

The scope of this document includes:

- * Defining the architecture vision, principles, and guidelines
- * Establishing SOPs for architectural design, development, and testing
- * Outlining compliance monitoring, penalties, and operational governance
- * Providing guidance on communication, collaboration, and knowledge sharing

2. Core Policies and Standard Operating Procedures

2.1 Architecture Vision and Principles

The architecture vision is to design and develop a scalable, secure, and maintainable technology infrastructure that supports the business.

The following principles will guide our architectural decisions:

- * Scalability: Designs should be able to handle increased traffic, data volume, or user growth
- * Security: Designs should prioritize confidentiality, integrity, and availability of data
- * Maintainability: Designs should minimize technical debt and facilitate easy updates or modifications
- * Flexibility: Designs should accommodate changing business requirements and emerging technologies

2.2 Architectural Design and Development SOPs

2.2.1 Design Phase

- * Conduct a thorough analysis of the business requirements and functional specifications
- * Develop a high-level architecture design, including system components, interfaces, and data flows
- * Create detailed design documents, including component diagrams and sequence diagrams
- * Obtain approval from stakeholders and management before proceeding to implementation

2.2.2 Development Phase

- * Implement the designed architecture using approved tools, frameworks, and technologies
- * Conduct thorough testing, including unit testing, integration testing, and user acceptance testing (UAT)
- * Ensure all code is properly documented, commented, and follows established coding standards
- * Obtain approval from stakeholders and management before deploying to production

2.2.3 Testing and Quality Assurance SOPs

- * Develop comprehensive test plans and test cases for each component or system
- * Conduct thorough testing, including unit testing, integration testing, and UAT

- * Ensure all tests are properly documented and tracked
- * Obtain approval from stakeholders and management before releasing to production

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Compliance Monitoring

The Architecture department will monitor compliance with architectural design and development SOPs through:

- * Regular code reviews and testing
- * Automated testing and monitoring tools
- * Quarterly architecture review meetings with stakeholders and management

3.2 Penalties for Non-Compliance

Failure to comply with architectural design and development SOPs may result in:

- * Temporary suspension of coding privileges
- * Mandatory re-training or certification program
- * Disciplinary action, up to and including termination

3.3 Operational Governance

The Architecture department will maintain operational governance through:

- * Quarterly architecture review meetings with stakeholders and management
- * Annual planning and budgeting cycles for architecture initiatives
- * Continuous monitoring and evaluation of architectural designs and development processes
