

****Document Metadata****

- * Document ID: TECH-ARCH-1594
- * Department: Architecture
- * Author: Ronald James
- * Effective Date: 2020-12-02

1. Document Scope and Executive Summary

This document outlines the reference architecture for the Architecture department, providing a comprehensive framework for design and development.

- * Defining the core policies and standard operating procedures (SOPs) for the Architecture department
- * Establishing compliance monitoring, penalties, and operational governance guidelines

The purpose of this document is to ensure consistency, efficiency, and effectiveness in the development of enterprise software and infrastructure.

2. Core Policies and Standard Operating Procedures

2.1 Design Principles

The Architecture department adheres to the following design principles:

- * Separation of Concerns (SoC): modularize systems into distinct layers or components
- * Single Responsibility Principle (SRP): each component has a single, well-defined responsibility
- * Don't Repeat Yourself (DRY): avoid duplicating code or logic
- * KISS: keep it simple and straightforward

2.2 Software Development Life Cycle (SDLC)

The Architecture department follows the Agile SDLC, with the following stages:

1. Planning: define project goals, scope, and timelines
2. Analysis: gather requirements, identify stakeholders, and define user stories
3. Design: create high-level design, component diagrams, and technical specifications
4. Development: implement software components, integrate with other systems
5. Testing: verify software functionality, performance, and security
6. Deployment: release software to production environment, monitor, and maintain

2.3 Code Quality and Standards

The Architecture department adheres to the following code quality standards:

- * Code style guidelines (indentation, naming conventions)
- * Error handling and exception management
- * Logging and debugging practices
- * Version control system usage (e.g., Git)

2.4 Testing and Validation

The Architecture department conducts the following testing and validation activities:

- * Unit testing: verify individual components or functions
- * Integration testing: test component interactions and data flows
- * System testing: validate overall system functionality and performance
- * Acceptance testing: ensure software meets user requirements

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Compliance Monitoring

The Architecture department will:

- * Conduct regular audits to ensure compliance with design principles, SDLC, code quality standards, and testing practices
- * Identify and address any non-compliance issues or deviations from established procedures

3.2 Penalties

In the event of non-compliance, the following penalties may apply:

- * Minor infractions: verbal warning, additional training or mentoring
- * Moderate infractions: written warning, temporary suspension of privileges (e.g., code review)
- * Major infractions: formal reprimand, permanent suspension of privileges (e.g., code review)

3.3 Operational Governance

The Architecture department will:

- * Establish a governing body to oversee and enforce compliance with this document
- * Define roles and responsibilities for architects, engineers, and other stakeholders
- * Develop and maintain documentation, training materials, and communication channels
