

TECH-ARCH-1752: Architecture Reference Document

Department: Architecture

Author: Scott Roberts

Effective Date: 2022-12-30

Document Scope and Executive Summary

This Architecture Reference Document (ARD) outlines the core policies, standard operating procedures, and governance structure.

The ARD aims to:

- * Define architecture principles, standards, and best practices
- * Establish procedures for designing, developing, testing, and deploying architectures
- * Provide guidelines for collaboration and communication among team members
- * Outline compliance monitoring, penalties, and operational governance

2. Core Policies and Standard Operating Procedures

Architecture Principles

- Modularity**: Design architectures as a set of loosely coupled modules that can be developed, tested, and deployed independently.
- Scalability**: Ensure architectures can scale horizontally or vertically to accommodate increasing workloads or user demand.
- Flexibility**: Design architectures with flexibility in mind, allowing for easy adaptation to changing business requirements or technology.

Architecture Development Process

- Requirements Gathering**: Collaborate with stakeholders to gather and document functional and non-functional requirements.
- Design**: Develop a detailed design document outlining the architecture's components, interactions, and relationships.
- Implementation**: Implement the architecture using approved technologies and tools.
- Testing**: Conduct thorough testing to ensure the architecture meets requirements and is free from defects.
- Deployment**: Deploy the architecture in production, monitoring its performance and making adjustments as needed.

Communication and Collaboration

- Regular Meetings**: Hold regular meetings with stakeholders and team members to discuss progress, address concerns, and make decisions.
- Documentation**: Maintain accurate and up-to-date documentation of architectural designs, development processes, and team communication.
- Change Management**: Establish a change management process for modifying or updating architectures.

3. Compliance Monitoring, Penalties, and Operational Governance

Compliance Monitoring

- Regular Audits**: Conduct regular audits to ensure compliance with architecture principles, standards, and best practices.
- Monitoring Metrics**: Track key performance indicators (KPIs) and metrics to monitor the effectiveness of architectures.

Penalties for Non-Compliance

- Warning**: Issue a warning for minor deviations from architecture guidelines or procedures.
- Rectification**: Require rectification of architectural defects or non-compliant designs within a specified timeframe.
- Reprimand**: Issue a reprimand for repeat offenders or severe non-compliance.

Operational Governance

- Architecture Review Board**: Establish an Architecture Review Board to review and approve architectural designs, ensuring compliance with standards and best practices.

2. **Architecture Committee**: Create an Architecture Committee to oversee the development and maintenance of architectures
3. **Continuous Improvement**: Foster a culture of continuous improvement, encouraging feedback, innovation, and process re

By adhering to this Architecture Reference Document, the Architecture department will ensure that its designs are innovative, so
