- * Document ID: TECH-ARCH-1837
- * Department: Architecture
- * Author: Patrick Gonzales MD
- * Effective Date: 2022-10-03

1. Document Scope and Executive Summary

This document serves as the reference guide for the Architecture department, outlining core policies, standard operating procedures, and best practices.

- * Defining the roles and responsibilities within the Architecture team
- * Establishing standards for architectural design, development, and testing
- * Outlining procedures for ensuring compliance with regulatory requirements and company policies
- * Providing guidance on incident response, reporting, and root cause analysis

The executive summary highlights the importance of maintaining a well-structured and compliant architecture department. This document provides the necessary framework to achieve these goals.

2. Core Policies and Standard Operating Procedures

2.1 Architectural Governance

- * The Architecture team is responsible for developing and maintaining the overall architecture vision, strategy, and roadmap.
- * All architectural designs must be reviewed and approved by the Architecture Steering Committee (ASC) before implementation.
- * ASC members will ensure that all designs align with company policies, regulatory requirements, and industry standards.

2.2 Design and Development

- * Architects are responsible for developing high-level design documents, including system architecture diagrams and technical specifications.
- * All code must be reviewed and tested according to the company's quality assurance process.
- * Code changes will be documented in the issue tracking system (JIRA) with clear descriptions of the changes made.

2.3 Testing and Quality Assurance

- * Architects are responsible for developing test plans, test cases, and testing procedures.
- * All tests must be executed and validated according to the company's quality assurance process.
- * Test results will be documented in the issue tracking system (JIRA) with clear descriptions of the results.

2.4 Change Management

- * Changes to existing architectures or systems must be reviewed and approved by the ASC before implementation.
- * All changes will be documented in the change management system (e.g., JIRA) with clear descriptions of the changes made.
- * A rollback plan will be developed for all high-impact changes.

2.5 Incident Response

- * The Architecture team is responsible for responding to architectural-related incidents, including system outages or performance issues.
- * Incidents will be reported and tracked in the incident management system (e.g., ServiceNow).
- * Root cause analysis will be conducted for each incident, and a plan will be developed to prevent similar incidents from occurring.

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Compliance Monitoring

- * The Architecture team is responsible for monitoring compliance with regulatory requirements and company policies.
- * Compliance checks will be performed on a regular basis (e.g., quarterly) to ensure adherence to standards.
- * Non-compliance will result in immediate action taken by the ASC.

3.2 Penalties

- * Failure to comply with architectural governance, design, or development procedures may result in:
 - + Written warning
 - + Suspension of architectural privileges
 - + Termination of employment (in extreme cases)

3.3 Operational Governance

- * The Architecture team is responsible for maintaining operational governance, including:
 - + Managing the architecture backlog
 - + Tracking and reporting key performance indicators (KPIs)
 - + Conducting regular retrospectives to improve processes and procedures
