

ARCHITECTURE REFERENCE DOCUMENT: TECH-ARCH-2378

Metadata

Document ID: TECH-ARCH-2378

Department: Architecture

Author: Christopher Flores

Effective Date: 2021-01-23

1. Document Scope and Executive Summary

This Architecture Reference Document (ARD) outlines the core policies, standard operating procedures (SOPs), and guidelines

Scope

The scope of this ARD includes:

- * Defining architectural principles and standards
- * Establishing SOPs for design, development, and testing
- * Outlining compliance monitoring and penalty procedures
- * Specifying operational governance and communication protocols

Executive Summary

This document aims to provide a comprehensive framework for the Architecture department to operate within. By adhering to the

2. Core Policies and Standard Operating Procedures

2.1 Architectural Principles

The following architectural principles will guide all architecture-related activities:

- * Modularity: All systems shall be designed as modular components to facilitate scalability and maintainability.
- * Reusability: Components and subsystems shall be designed with reusability in mind to reduce development time and costs.
- * Scalability: Systems shall be designed to scale horizontally and vertically to accommodate changing business needs.
- * Security: All systems shall prioritize security by implementing robust authentication, authorization, and encryption mechanisms.

2.2 Design Process

The design process for architecture-related activities shall follow the following steps:

1. Requirements gathering
2. Conceptual design
3. Detailed design
4. Implementation
5. Testing and validation
6. Deployment and maintenance

2.3 Development and Testing

All development and testing activities shall adhere to the following guidelines:

- * Code reviews: All code changes must undergo peer review to ensure adherence to coding standards and best practices.
- * Unit testing: All new code shall be accompanied by comprehensive unit tests to ensure functionality and reliability.
- * Integration testing: All systems shall undergo integration testing to ensure seamless interactions with other components.

2.4 Documentation and Communication

The following documentation and communication protocols shall be followed:

- * Architecture diagrams: All architecture-related documents shall include clear, concise, and accurate diagrams that illustrate system components and their interactions.
- * Technical documentation: All technical documentation shall be maintained in a centralized repository for easy access and sharing.
- * Meetings and status updates: Regular meetings and status updates shall be conducted to ensure stakeholders are informed of project progress and any changes.

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Compliance Monitoring

The Architecture department shall monitor compliance with these guidelines through regular audits, code reviews, and testing. Any non-compliance shall be reported to the relevant stakeholders for corrective action.

3.2 Penalties

In cases of non-compliance, the following penalties may apply:

- * Verbal warnings
- * Written warnings
- * Suspension or termination of privileges (e.g., access to specific systems or resources)
- * Mandatory training or retraining

3.3 Operational Governance

The Architecture department shall maintain a centralized governance structure for architecture-related activities. This structure shall ensure that all architectural decisions are made in a consistent and controlled manner.

- * A governing body responsible for making architectural decisions and ensuring compliance with these guidelines.
- * A change management process for tracking and controlling changes to the architecture.
- * A communication plan for disseminating information about the architecture and its evolution.

By following this Architecture Reference Document, we can ensure that our architecture practices are aligned with industry best practices and standards.
