Author: Theresa Murray
Effective Date: 2025-09-19

Architecture Reference Document: TECH-ARCH-2880
1. Document Scope and Executive Summary

This document outlines the core policies, standard operating procedures (SOPs), and compliance monitoring guidelines for the Architecture department.

The scope of this document includes:

- * Defining architectural styles, principles, and guidelines
- * Establishing SOPs for designing and developing software systems
- * Outlining compliance monitoring procedures for regulatory requirements and industry best practices
- * Providing operational governance guidelines for the Architecture department

2. Core Policies and Standard Operating Procedures

2.1 Design Principles and Guidelines

The Architecture department follows a set of design principles that guide the development of software systems. These principles are:

- * Separation of Concerns (SoC)
- * Single Responsibility Principle (SRP)
- * Don't Repeat Yourself (DRY)
- * KISS (Keep it Simple, Stupid)

Architects are expected to adhere to these principles when designing and developing software systems.

2.2 Technical Standards

The Architecture department follows a set of technical standards for software development. These standards include:

- * Programming languages: Java, Python, C++
- * Development frameworks: Spring, Django, React
- * Database management systems: MySQL, PostgreSQL, MongoDB

Architects are expected to familiarize themselves with these technical standards and apply them accordingly.

2.3 Project Management Practices

The Architecture department follows a set of project management practices for software development projects. These practices are:

- * Agile methodologies: Scrum, Kanban
- * Version control systems: Git, SVN

- * Issue tracking systems: JIRA, Trello

Architects are expected to apply these project management practices throughout the software development lifecycle.

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Regulatory Requirements

The Architecture department must comply with regulatory requirements for software development, including:

- * Data privacy regulations: GDPR, HIPAA
- * Security standards: OWASP, NIST

Architects are responsible for ensuring compliance with these regulatory requirements throughout the software development lifecycle.

3.2 Industry Best Practices

The Architecture department must adhere to industry best practices for software development, including:

- * Code reviews and testing
- * Continuous integration and deployment (CI/CD)
- * Automated testing and monitoring

Architects are expected to apply these industry best practices throughout the software development lifecycle.

3.3 Operational Governance

The Architecture department operates under a set of operational governance guidelines that include:

- * Decision-making processes: approval workflow, change management
- * Communication protocols: meeting schedules, reporting formats
- * Resource allocation: budgeting, staffing

Architects are expected to adhere to these operational governance guidelines throughout the software development lifecycle.
