

Document ID: TECH-ARCH-3358

Department: Architecture

Author: Dean Smith

Effective Date: 2020-06-22

1. Document Scope and Executive Summary

This document serves as a comprehensive reference guide for the Architecture department, outlining key policies, procedures, and standards.

- * Defining architectural principles and standards
- * Establishing best practices for system design and implementation
- * Outlining roles and responsibilities within the Architecture department
- * Providing guidance on compliance monitoring, penalties, and operational governance

2. Core Policies and Standard Operating Procedures

2.1 Architectural Principles

The following principles shall guide all architectural decisions:

- * **Modularity**: Designs shall be modular, with clear interfaces between components.
- * **Scalability**: Systems shall be designed to scale horizontally and vertically.
- * **Security**: All systems shall prioritize security and incorporate robust threat detection and mitigation measures.
- * **Interoperability**: Systems shall be designed to integrate seamlessly with existing and future solutions.

2.2 Design and Development Process

The Architecture department shall adhere to the following design and development process:

- Requirements Gathering**: Gather and document system requirements through collaboration with stakeholders and end-users.
- Design**: Develop high-level designs, including component diagrams, data flow diagrams, and use cases.
- Implementation**: Implement systems according to designed specifications, utilizing approved technologies and tools.
- Testing and Quality Assurance**: Conduct thorough testing and quality assurance activities to ensure system meets requirements.
- Deployment and Maintenance**: Deploy systems and maintain them through regular updates, patches, and monitoring.

2.3 Change Management

The Architecture department shall follow a formal change management process for all architectural changes:

- Request**: Submit requests for architectural changes, including justification and impact analysis.
- Review**: Review requests by the Architecture team to ensure alignment with architectural principles and standards.
- Approval**: Obtain approval from relevant stakeholders and executives.
- Implementation**: Implement approved changes, ensuring minimal disruption to existing systems.

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Compliance Monitoring

The Architecture department shall monitor compliance with this document through regular audits and reviews:

- * **Audits**: Conduct periodic audits to ensure adherence to architectural principles and standards.

* **Reviews***: Review system designs, implementations, and documentation for compliance.

3.2 Penalties

Failure to comply with this document may result in the following penalties:

* **Verbal Warning***: A verbal warning shall be issued for minor infractions or non-compliance.

* **Written Warning***: A written warning shall be issued for repeated or more serious infractions.

* **Disciplinary Action***: Disciplinary action, including termination of employment, may be taken for severe or persistent non-compliance.

3.3 Operational Governance

The Architecture department shall maintain operational governance through the following mechanisms:

* **Architecture Steering Committee***: Establish an architecture steering committee to oversee architectural direction and ensure alignment with business goals.

* **Change Management Process***: Utilize a formal change management process to manage architectural changes and minimize risk.

* **Documentation and Knowledge Management***: Maintain accurate documentation and knowledge management systems to facilitate information sharing and decision-making.
