

Architecture Reference Document: TECH-ARCH-6143

Metadata

* Document ID: TECH-ARCH-6143

* Department: Architecture

* Author: Amy Hubbard

* Effective Date: 2024-04-15

1. Document Scope and Executive Summary

This Architecture Reference Document (ARD) outlines the policies, procedures, and guidelines for the Architecture department and its role in the organization.

The scope of this document includes:

- * Defining the Architecture department's role and responsibilities
- * Outlining the processes and procedures for designing, developing, testing, and maintaining architectures
- * Establishing guidelines for architecture development, including principles, patterns, and standards
- * Describing the roles and responsibilities of architects, technical leads, and other stakeholders

2. Core Policies and Standard Operating Procedures

2.1 Architecture Development Process

The Architecture Development Process (ADP) is a systematic approach to designing and developing architectures that meets business requirements and aligns with company standards.

- Requirements Gathering**: Architects gather and document business requirements, technical requirements, and stakeholder expectations.
- Design**: Architects design the architecture using established patterns, principles, and standards.
- Implementation**: Architects implement the architecture, ensuring compliance with company standards and best practices.
- Testing and Quality Assurance**: Architects test and ensure the quality of the architecture meets business requirements and standards.
- Deployment and Maintenance**: Architects deploy and maintain the architecture, monitoring performance and making necessary updates.

2.2 Architecture Review and Approval Process

The Architecture Review and Approval Process (ARAP) ensures that all architectures meet company standards and are reviewed and approved by the appropriate stakeholders.

- Architecture Design Document**: Architects create a comprehensive design document outlining the architecture, including principles, patterns, and standards.
- Peer Review**: Colleagues review and provide feedback on the architecture design document.
- Stakeholder Feedback**: Stakeholders provide input and approval for the architecture design document.
- Final Approval**: The Architecture Lead reviews and approves the architecture design document.

2.3 Change Management Process

The Change Management Process (CMP) ensures that changes to architectures are managed, documented, and approved by the appropriate stakeholders.

- Change Request**: Architects submit a change request outlining the reasons for the change.
- Impact Analysis**: The Architecture Lead conducts an impact analysis to determine the effects of the change on the architecture.
- Stakeholder Feedback**: Stakeholders provide input and approval for the change.
- Implementation**: The architect implements the change, ensuring compliance with company standards and best practices.

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Compliance Monitoring

The Architecture department will monitor architecture development and deployment to ensure compliance with company standards.

- * Regular reviews of architecture design documents
- * Quarterly audits of architecture implementation and maintenance
- * Annual assessments of architecture quality and performance

3.2 Penalties for Non-Compliance

Non-compliant architectures may result in penalties, including:

- * Re-work or re-design of the architecture
- * Additional training or education for architects
- * Suspension or termination of architect privileges

3.3 Operational Governance

The Architecture department will establish and maintain operational governance to ensure effective management and coordination.

- * Establishing architecture working groups and committees
- * Defining roles and responsibilities for architects, technical leads, and stakeholders
- * Developing and maintaining architecture-related documentation and training materials
