

TECH-ARCH-6415: Architecture Reference Document

Department: Architecture

Author: Cindy Andrade

Effective Date: 2021-11-05

1. Document Scope and Executive Summary

This Architecture Reference Document outlines the core principles, policies, and standard operating procedures for the Architecture department.

The scope of this document includes:

- * Defining the roles and responsibilities of architecture team members
- * Outlining the process for designing and developing architectures
- * Establishing guidelines for collaboration with other departments
- * Providing procedures for managing architectural decisions and changes

This document is intended to be a living reference that will evolve over time as our company's needs and priorities change.

2. Core Policies and Standard Operating Procedures

2.1. Architecture Design Principles

The Architecture department follows the following design principles:

- * **Separation of Concerns**: Each module or service should have a single, well-defined responsibility.
- * **Abstraction**: Architectures should abstract away implementation details to provide a clean interface.
- * **Modularity**: Systems should be composed of loosely coupled modules that can be developed and deployed independently.

2.2. Architecture Development Process

The architecture development process consists of the following stages:

1. **Requirements Gathering**: Identify business requirements and gather input from stakeholders.
2. **High-Level Design**: Develop a high-level design for the architecture, including system components and interactions.
3. **Detailed Design**: Create a detailed design for each component or module, including technical specifications and interfaces.
4. **Implementation**: Implement the architecture using the chosen technologies and frameworks.
5. **Testing and Quality Assurance**: Test the architecture to ensure it meets the required quality standards.

2.3. Collaboration with Other Departments

The Architecture department collaborates closely with other departments, including:

- * **Engineering**: Work together to develop and deploy architectures.
- * **Product Management**: Provide input on product requirements and features.
- * **Operations**: Ensure architectures meet operational requirements and are scalable.

3. Compliance Monitoring, Penalties, and Operational Governance

3.1. Compliance Monitoring

The Architecture department is responsible for monitoring compliance with company policies and procedures. This includes:

- * **Architecture Governance**: Ensure architectural decisions align with company goals and priorities.
- * **Technical Debt Management**: Monitor and manage technical debt to prevent it from impacting the organization.

3.2. Penalties

In case of non-compliance, the following penalties may be applied:

- * **Warning**: A written warning to the architecture team member or department.
- * **Reprimand**: A formal reprimand by management.
- * **Termination**: In extreme cases, termination of employment.

3.3. Operational Governance

The Architecture department operates under the following governance structure:

- * **Architecture Steering Committee**: Oversees architectural decisions and ensures alignment with company goals.
- * **Department Leads**: Responsible for managing day-to-day operations and making tactical decisions.
- * **Team Members**: Focus on designing, developing, and maintaining architectures.

This document is subject to change as our company's needs and priorities evolve.
