- * Document ID: TECH-ARCH-6431
- * Department: Architecture
- * Author: Mr. Michael Buck
- * Effective Date: 2023-09-15

1. Document Scope and Executive Summary

This document outlines the standard operating procedures, core policies, and governance framework for the Architecture department.

The scope of this document includes:

- * Defining the department's role in the software development lifecycle
- * Outlining the core policies and standard operating procedures for architecture design, development, and maintenance
- * Establishing compliance monitoring and penalty frameworks for non-compliance with architectural standards and best practices
- * Describing operational governance procedures to ensure effective communication, collaboration, and decision-making within the department

2. Core Policies and Standard Operating Procedures

2.1 Architecture Design Principles

The Architecture department follows a set of core design principles that guide the development of architecture solutions:

- * ****Separation of Concerns****: Modularize systems into distinct components to facilitate maintenance and updates.
- * ****Loose Coupling****: Minimize dependencies between components to ensure flexibility and scalability.
- * ****Single Responsibility Principle****: Each component should have a single, well-defined responsibility.

2.2 Architecture Development Process

The architecture development process consists of the following stages:

1. ****Requirements Gathering****: Gather and document project requirements from stakeholders.
2. ****Architecture Design****: Develop a high-level architecture design based on gathered requirements.
3. ****Design Review****: Conduct a thorough review of the architecture design with relevant stakeholders.
4. ****Implementation****: Implement the architecture design using approved tools, frameworks, and technologies.
5. ****Testing and Validation****: Validate the implemented architecture against project requirements.

2.3 Change Management

The Architecture department follows a formal change management process to ensure that changes to existing architectures are managed effectively.

1. ****Request for Change****: Submit a request for change to the architecture team.
2. ****Impact Assessment****: Conduct an impact assessment of the proposed change on the existing architecture.
3. ****Design Review****: Conduct a design review of the proposed change with relevant stakeholders.
4. ****Approval****: Obtain approval from the relevant stakeholders and management.

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Compliance Monitoring

The Architecture department is responsible for monitoring compliance with architectural standards and best practices:

- * **Regular Audits**: Conduct regular audits to ensure adherence to architectural standards.

- * **Reporting**: Provide regular reporting on compliance status to management.

3.2 Penalties for Non-Compliance

In the event of non-compliance with architectural standards and best practices, the following penalties will apply:

- * **Warning**: Issue a warning to the responsible individual or team.

- * **Corrective Action**: Require the responsible individual or team to take corrective action to address the non-compliance issue.

- * **Repeat Offender**: In cases where repeated non-compliance occurs, impose additional penalties, including suspension or termination.

3.3 Operational Governance

The Architecture department operates under the following governance framework:

- * **Decision-Making Process**: Establish a decision-making process for architecture-related decisions.

- * **Communication Plan**: Develop a communication plan to ensure effective communication and collaboration within the department.

- * **Meeting Schedule**: Establish a meeting schedule to facilitate regular updates, discussions, and decision-making.

By following this document, the Architecture department will be able to maintain high-quality architecture solutions that meet project requirements.
