

ARCHITECTURE REFERENCE DOCUMENT: TECH-ARCH-6924

Department: Architecture
Author: Timothy Garcia
Effective Date: 2024-07-19

Document ID: TECH-ARCH-6924

1. Document Scope and Executive Summary

This reference document outlines the core policies, standard operating procedures, and governance framework for the Architecture Department.

The scope of this document includes:

- * Defining the architecture principles and standards
- * Outlining the standard operating procedures for architecture design and development
- * Establishing compliance monitoring and penalty framework
- * Providing guidelines for operational governance and decision-making

This document applies to all architects, engineers, and other stakeholders involved in software system design and development.

2. Core Policies and Standard Operating Procedures

Architecture Principles

1. **Separation of Concerns**: Each component or layer should have a single responsibility and not be responsible for multiple unrelated tasks.
2. **Abstraction**: Components should be designed to abstract away implementation details, allowing for flexibility and reuse.
3. **Decoupling**: Components should be decoupled from each other to allow for independent development, testing, and deployment.

Standard Operating Procedures

1. **Architecture Design**:
 - * Develop a high-level architecture design document for new software systems or significant changes to existing systems.
 - * Review and approve the design document by the Architecture department and relevant stakeholders.
2. **Code Reviews**:
 - * Conduct code reviews for all new code written in the organization, including design documents and implementation details.
 - * Ensure that code reviews are performed by a qualified architect or engineer.
3. **Testing and Validation**:
 - * Develop and execute comprehensive testing plans to validate the architecture and system functionality.
 - * Perform regular testing and validation exercises to ensure the architecture remains stable and meets requirements.

3. Compliance Monitoring, Penalties, and Operational Governance

Compliance Monitoring

1. **Architecture Reviews**: Conduct regular architecture reviews to ensure compliance with established principles and standards.
2. **Code Audits**: Conduct code audits to ensure compliance with coding standards, best practices, and security guidelines.

Penalties

1. **Non-Compliance**: Failure to comply with architecture principles, standard operating procedures, or testing and validation requirements.
 - * Delayed or cancelled project approval
 - * Mandatory rework or recoding of non-compliant code

* Possible disciplinary action for repeat offenders

Operational Governance

1. **Architecture Committee**: Establish an Architecture committee to oversee the development and maintenance of architecture
2. **Stakeholder Engagement**: Engage with stakeholders, including architects, engineers, project managers, and business lea

By following this reference document, we can ensure that our Architecture department operates efficiently, effectively, and in co
