

TECH-ARCH-8698: Architecture Reference Document

Metadata

- * Document ID: TECH-ARCH-8698
- * Department: Architecture
- * Author: Jack Patton
- * Effective Date: 2020-01-23

1. Document Scope and Executive Summary

This reference document outlines the policies, procedures, and best practices for the Architecture department at [Company Name].

The scope of this document includes:

- * Definition of architectural roles and responsibilities
- * Standardized architecture development process
- * Guidelines for system design, integration, and testing
- * Compliance with relevant regulations and standards

2. Core Policies and Standard Operating Procedures

2.1 Architecture Development Process

Our company follows a standardized architecture development process that ensures consistent and high-quality designs across all projects.

1. **Requirements Gathering**: Identify business requirements and gather input from stakeholders.
2. **Conceptual Design**: Develop a high-level design concept based on gathered requirements.
3. **Detailed Design**: Create a detailed design specification, including system architecture and component interactions.
4. **Implementation**: Implement the designed system, ensuring that it meets the specified requirements.
5. **Testing and Validation**: Test and validate the implemented system to ensure it meets the required standards.

2.2 Architecture Guidelines

Our company has established guidelines for system design, integration, and testing. These guidelines include:

- * **Component-based architecture**: Design systems using reusable components that can be easily integrated into other systems.
- * **Microservices architecture**: Implement microservices-based designs to facilitate scalability, flexibility, and maintainability.
- * **API-first development**: Develop APIs as the primary interface for system interaction.

2.3 Change Management

Our company has a formal change management process in place to ensure that all changes to architectural designs are properly managed and approved.

3. Compliance Monitoring, Penalties, and Operational Governance

3.1 Compliance Monitoring

The Architecture department is responsible for monitoring compliance with our company's architecture policies and standards. Violations will be reported and addressed accordingly.

3.2 Penalties for Non-Compliance

Non-compliance with architectural policies and standards may result in penalties, including:

* **Warning**: A written warning issued by the Architecture department.

* **Corrective Action**: The project team must take corrective action to address non-compliance issues.

* **Project Suspension**: In severe cases, a project may be suspended or terminated until compliance is achieved.

3.3 Operational Governance

The Architecture department is responsible for governing architectural operations and ensuring that all projects are properly managed.

* **Architecture Board**: A formal board composed of senior stakeholders and architects to oversee architecture-related decisions.

* **Design Reviews**: Regular design reviews to ensure that all designs meet the established guidelines and standards.

By following this reference document, we can ensure that our company's software systems are designed and implemented with the highest quality and security standards.
